Department of Computer Science and Engineering
(Artificial Intelligence and Machine Learning)
COURSE ASSESSMENT SCHEME 2026-27 (Under NEP, 2020)

Course Name: ML DevOps
Course Code: UAMPC0703
Class: Final Year. Tech -CSE (Artificial Intelligence and Machine Learning) Semester - VII

Sr. No.	Subhead for Evaluation	Weightage in %	Description	Scheduled Date
1	Tool: AWS Academy Cloud Course Modules	100	Design problems statements will be given for total 20 marks related to CO3 (L3) and CO4 (L4). The total marks will be further converted to 10 marks.	11th August to 22th September 2026

Design Problem Statement Selection Guidelines:

1. Access the AWS Academy Cloud Course for 5 modules of AWS IAM, S3, EC2, Amazon RDS Database, Amazon VPC
2. Refer to Theory-ISE1-AWS Architecture Design on LMS

   Google Drive Link for Word Template:
   https://drive.google.com/drive/folders/1ETzNHDgzbfje-yHgS8p7D6QH3nl2RL6F?usp=drive_link

3. Students can create AWS Architecture for their Final Year Project Title
4. OR Students can also take any real time use case from Banking, Healthcare, Supply-chain etc. as per their internship scope domain
5. OR Students can also take any real time AI / Machine Learning / NLP / Deep learning domain Use case to propose AWS Architecture

Final Submission on ERP:

1. PDF Version of Theory-ISE1-AWS Architecture Design should be uploaded

Marking Evaluation: Timely Submission, Technical Correctness, and Logical Thinking and solution to every problem

ISE - 2: 10 Marks

Sr. No.	Subhead for Evaluation	Weightage in %	Description	Scheduled Date
1	Tool: Design and Deploy MLOps Use case using MLFlow Tool	100	Assignment will be given for total 20 marks related to CO1 (L2) and CO2 (L3). The total marks will be further converted to 10 marks.	02nd November 2026

Tool 1: An assignment based on standard theoretical and practical -related concepts, procedures, and interpretations associated with Units 1, 2, and 3 on MLFlow tool problem statement will be given to the students. This assignment carries a weightage of 20 marks, which will be converted to 10 marks, and is mapped to CO1 (L2) and CO2 (L3). Students must solve the problems through by Design and Deploy the MLOps Drift use case using Tool installation and Upload the Solution the ERP by the due date. Assessment will be based on Timely Submission, Technical Correctness, and Logical Thinking.

Design Problem Statement Selection Guidelines:

1. Install MLFlow Tool Set using https://mlflow.org/docs/latest/ml/
2. Identify Machine learning, Deep Learning, Other Use case Dataset from the scope of your Internship Domain.
3. Apply Drift concepts with respect to your Data Set Domain.
4. Google Drive Link for Word Template: https://drive.google.com/drive/folders/1ETzNHDgzbfje-yHgS8p7D6QH3nl2RL6F?usp=drive_link
5. Template: Theory-ISE2-MLFlow Data Analysis

Final Submission on ERP:

1. PDF Version of Theory-ISE2-MLFlow Data Analysis should be uploaded

Marking Evaluation: Timely Submission, Technical Correctness, and Logical Thinking and solution to every problem

Mr. Shekhar Jalane, Mr. Vinay Prabhavalkar
